FSRHDG
Rugged, Adjustable, Rotating Operator Armchair System

Construction:
The FSRHDG is a heavy duty, extremely adjustable operator armchair system that integrates an orthopedic designed seat with mill-duty sized controls into a stylish, trim package. The Koenig Komfort Seat has dual lumbar, side bolsters that can be adjusted to contour against the body, baffles for increased air flow and adjustable upper back & neck support. The slim consoles, integrated leather adjustable armrests and minimalist foot rest can be easily angled and moved in all directions to accommodate operators of different statures in a variety of cabin configurations. The consoles also include space for our mill duty line of controllers including a variety of output devices and room for additional pilot devices and pushbuttons.

Application:
Commonly used in pulpits, simulators and all cab operated equipment including overhead cranes, container cranes, gantry cranes, straddle carriers, mining dredges, draglines, and shovels.
